Quick guide: With the Prototype to Test Template the prototypes can be defined purposefully. Based on the assumptions to be verified, different variants are defined and one selected. After the idea phase, the ideas are converted into prototypes and tested with real users.

More tips & tricks for this template on book page: 199

Preparation:

Ideas have been selected for an experiment with a prototype.

What?

Define different prototypes to be built.

Why?

Why do we want to build an experiment / prototype?

How?

How could we make it possible for the user (tester) to experience this?
